**Price: \$15.95 CAD**

### Short Description

Beautiful coats and a healthy immune system! Pharmaceutical-grade omega-3 essential fatty acids derived from mackerel, sardine and anchovy. [Click on the image for more details.](#)

### Description

This cold water fish oil is from wild (not farmed), non GMO sardine and/or anchovy and/or mackerel and is a premium pharmaceutical grade source of omega-3 essential fatty acids. It is a refined, deodorized, and clear yellow oil. The fish are harvested from marine waters of the Southeast Pacific (FAO 87) off the coast of South American Mainland or from the Eastern Central Atlantic (FAO 34).

Your dog or cat requires a certain amount of fat for proper growth and functioning. The fats that are necessary for good health, but which cannot be manufactured by their body are called essential fatty acids.

Canadian pharmaceutical level Good Manufacturing Practices (GMP) is a strict quality certification system regulated by Health Canada. It is designed to define how products are developed and produced, to ensure both safety and proper ingredient identification. This includes tests to guarantee active ingredient content, purity, clarity and homogeneity. With proof of ingredient activity and high

quality, stability is assured. Every batch of The Carnivora™ Cold Water Fish Oil is sampled and thoroughly tested to meet these standards.

The Carnivora™ Cold Water Fish Oil is ideally consumed within an eight-week period once opened and kept in a cool (10- 25 degrees celcius) dry place. Be sure to protect it against high temperature, moisture and light. The flip-top cap should be firmly closed after use to prevent oxidation of the oil. Because of their sensitivity, EFAs need to be stored properly and used with care. If this protection is not given, EFAs are damaged and they will not retain the health benefits they are meant to provide.

The Carnivora™ Cold Water Fish Oil should be supplemented on a daily basis. Almost every pet will benefit from The Carnivora™ Cold Water Fish Oil, especially if they show symptoms of stiffness or arthritis, allergies or require immune system support. Dogs and cats that are itchy, display poor skin condition, or whose coats lack luster and shine will also benefit. Carnivora™ Cold Water Fish Oil is critical to normal eye and brain development in the fetus and therefore essential for pregnant as well as lactating females.

Per 1 teaspoon (4.6g) serving

Eicosapentaenoic Acid (EPA) - omega-3.....802mg

Docosahexaenoic Acid (DHA) - omega-3.....524mg

Vitamin E (mixed tocopherols).....10 I.U.

Approximate Feeding Guidelines per day
